

DMT Alloy Processors was established in Singapore in 1997 as a trading company specializing in new titanium products and non-ferrous scrap.

Today, it is involved in the trading and processing of scraps of minor metals, super alloys and specialty steels, and serves mainly the aerospace, power, defense, nuclear and semiconductor industries.

DMT has ISO 9001, 14001 and 18001 quality, environmental and occupational safety approvals and is also a member of the Singapore Business Federation and the Singapore Indian Chamber of Commerce and Industry.

The company employs over 30 staff and operates out of an 80,000 sq. ft. facility in the Tuas industrial area fitted with an in-house analysis laboratory, plasma cutting stations, cut-wire and steel bead shot blasters and a turning chip processing line.
