

Elemental Metals was formed back in April 2017. We are a competitive supplier of high purity elemental raw materials, alloys, oxides and specialty chemicals to the aerospace, medical, electronics and jewelry markets.

We intrinsically understand the materials we offer and their application. Our president, Eric Leonard, is a metallurgist with over 30 years of industry experience, melting and casting alloys, superalloys and precious metals. This hands-on experience enables us to provide unparalleled service that will help our clients navigate through the material definition and purchase processes.

In addition to materials, Elemental Metals offers, through our strategic partners, specialty vacuum melting, atomization, material resizing, analysis, fabrication, toll melting, and recycling. Chances are if you need something that is hard to find, we can provide it.

We pride ourselves in building long lasting trusting relationships with our clients, our suppliers, and the many different companies that operate in the metals industry. We look forward to you joining our continuously expanding network.
