

Established in 2006, Ximei Resources is a leading producer of tantalum- and niobium-based metallurgical products in China and supply over 40% of China's demand for tantalum and niobium oxides.

After successfully being listed in Hong Kong Stock Exchange in March, 2020, Ximei Resources has been able to expand to downstream by establishing two metal plants, which provide us with a yearly capacity of **200mt Tantalum metal** (produced both through Sodium and Carbon Reduction Routes) and a yearly capacity of **1,500mt Niobium Metal** (Niobium Chunk, Niobium Ingot and Ferro Niobium).

By establishing a fully integrated business model, we could offer our customers more reliable sources at more competitive pricing. We look forward to discussing this further with you.
